The Liver Biology Conference: Fundamental Mechanisms and Translational Applications

Organizer Bio: Lijan Hui, PhD

Professor, Institute of Biochemistry and Cell Biology, Shanghai Institutes for Biological Sciences, Chinese Academy of Science, China

Dr. Hui uses the liver as an experimental system to study the underlying mechanisms of adult tissue regeneration and tumorigenesis. His research program focuses on the role of cell differentiation and identity conversion, e.g. transdifferentiation and dedifferentiation. Better understanding of hepatic cell identity molecular underpinnings will help foster identifying new therapeutic strategies for liver diseases and cancers.
